Professional Summary

Full Stack Developer with 3+ years of experience building scalable web applications using Node.js, Angular, React, and modern JavaScript frameworks. Strong experience in backend development, API design, authentication systems, eCommerce platforms (Shopify, BigCommerce), and integrating AI services (Google Gemini) to build intelligent, high-performance applications. Passionate about clean, modular code architecture.

Technical Skills

Languages: JavaScript, TypeScript, HTML, CSS, Dart, Liquid

Frontend: Angular, React.js

Backend: Node.js, Express.js, Sails.js

Database: MongoDB

APIs: REST, GraphQL

Tools & Tech: Git, Postman, JWT, Webhooks, Google Cloud Scheduler

AI Integration: Google Gemini API (Multimodal)

E-commerce: Shopify, BigCommerce

Work Experience

Full Stack Developer

Dec 2022 – Present

Acumen Technologies Group Inc

- Built and maintained scalable eCommerce applications using Angular, Node.js, and Sails.js, emphasizing modular code architecture.
- Designed and optimized RESTful APIs and GraphQL services, ensuring high performance for data-intensive applications.
- Engineered webhook-based systems for real-time payment and order processing, including the integration of PayPal subscription workflows for secure recurring payments.
- Developed a robust authentication system featuring JWT, role-based access control (RBAC), and a refresh token strategy utilizing HTTP-only cookies.
- Automated complex product workflows including creation, updates, media uploads, and metafield management.
- Customized Shopify shipping logic dynamically based on complex business requirements.
- Generated automated CSV/JSON reports for business analytics using scheduled backend jobs via Google Cloud Scheduler.

Mobile Application Developer

Aug 2022 – Dec 2022

Acumen Technologies Group Inc

- Developed cross-platform mobile applications using Flutter
- Integrated external APIs and managed efficient local storage solutions to optimize app performance.
- Collaborated closely with backend teams to ensure seamless data flow and integration.

Projects

AI Image SEO Generator

 [GitHub](#)

- Built an AI-powered web application that analyzes uploaded images and dynamically generates SEO-optimized metadata (title, description, tags, category, publish time).
- Integrated Google's Gemini multimodal AI for advanced image analysis.
- Implemented image uploading utilizing Multer with in-memory processing.
- Designed scalable backend APIs using Node.js and Express with strict separation of routes and controllers.

JWT Authentication API

 [GitHub](#)

- Implemented secure user authentication utilizing JSON Web Tokens (JWT).
- Designed and integrated role-based access control (RBAC) to manage Admin and Employee privileges.
- Built protected API routes utilizing custom middleware for secure request validation.
- Hardened security by implementing a refresh token mechanism using HTTP-only cookies.
- Ensured robust data protection by implementing bcrypt hashing for password security.

Education

B.E. Electronics and Communication Engineering

2018 – 2022

University V.O.C College Of Engineering

CGPA: 7.22 / 10
